

Award-winning managed detection and response

The advanced and evolving nature of cyber threats means that even with the best preventative security controls in place, your business is not immune to being compromised. To minimise cyber security risk, having the capability to identify and eliminate attacks that evade perimeter defences is now essential.

The resources needed to proactively identify attacks 24/7 can place a huge strain on your business; from hiring qualified personnel through to sourcing and maintaining technologies, setting up and managing an in-house security operation can be a big undertaking – not to mention costly.

ThreatDetect™ Network MDR from Redscan provides the around-the-clock support needed to mitigate the risk posed by the latest sophisticated threat actors. Integrating offensive and defensive security personnel, advanced detection and deception technologies, and latest industry intelligence, this cost-effective service monitors network infrastructure to hunt for threats and provides the early notification and remediation advice necessary to respond swiftly and effectively.

Reducing breach detection time from months to minutes

Defending your business through an 'offensive' approach to security

Redscan's approach to defence reflects the belief that the only way to successfully safeguard against the latest attacks is to ruthlessly adopt the mindset and techniques of the adversary. By closely monitoring the security landscape to understand the latest tools, tactics and procedures used by criminals, our experts ensure ThreatDetect is optimised to quickly identify and react to threats.

“ThreatDetect is a cost-effective service that gives us peace of mind that we are doing all we can to protect our clients, our business, our staff, our counterparties and other partners”

Ben Lloyd, Head of IT Infrastructure
TT International

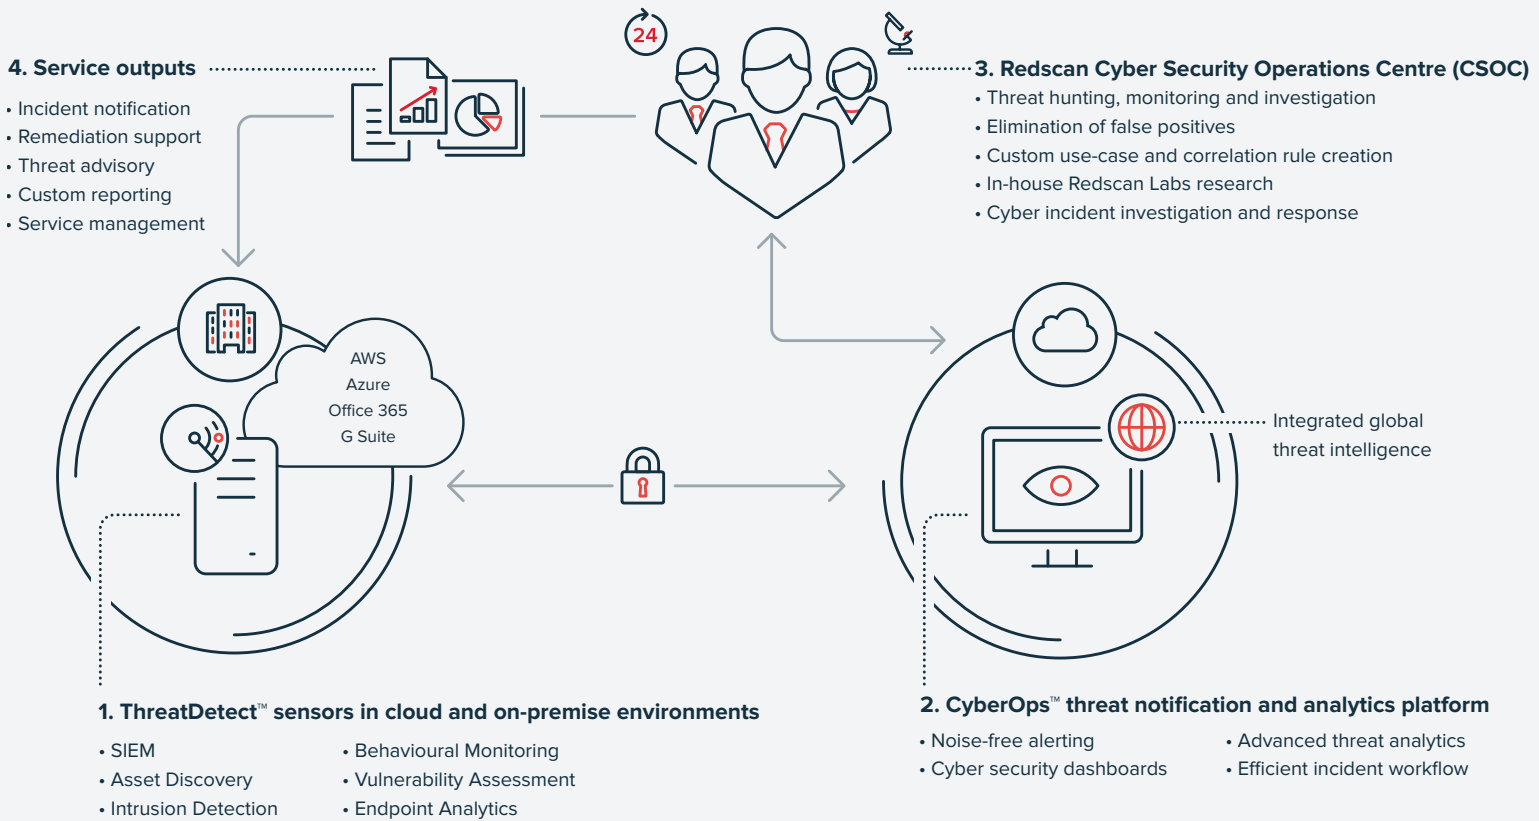

Business benefits

- ✓ Significantly reduce information security risk and enhance boardroom and investor confidence
- ✓ Thwart the latest sophisticated threats that outdated detection systems and preventative technology such as firewalls can miss
- ✓ Rapidly respond to genuine incidents and gain a clear understanding of the risks posed
- ✓ Improve efficiency by enabling in-house teams to focus on fixing rather than discovering threats
- ✓ Avoid up-front investment in expensive, complex and resource-intensive technology
- ✓ Remove the need to recruit and train in-house security professionals
- ✓ Receive end-to-end help and support detecting and mitigating complex security vulnerabilities
- ✓ Obtain enterprise-level protection at a price that can cost less than hiring just one security engineer

Key service features

- + An experienced team of CSOC experts trained to the highest professional standards
- + The latest detection, deception and incident response technologies - all fully installed, optimised and maintained
- + Real-time threat notification and analytics via Redscan's proprietary CyberOps™ platform
- + Orchestration of threat information from Redscan Labs and leading intelligence sources
- + Full incident investigation with clear remediation advice and reports suitable for compliance needs, such as the GDPR and PCI DSS
- + Monitoring of on-premise, cloud, and hybrid environments – including Office 365 and G Suite
- + Exceptional 24/7 service and flexible SLAs to provide help when needed

Managed threat detection with integrated incident response

Included as part of this cost-effective MDR service:

- **Red and blue team experts**
A team of offensive and defensive security professionals trained to the highest standards.
- **Cutting-edge technologies**
An advanced platform including the latest SIEM, Intrusion Detection, Behavioural Monitoring and scanning technologies.
- **Wide threat visibility**
Monitoring of on-premise, cloud and hybrid cloud environments through one unified platform.
- **CyberOps analytics**
Swift incident notification and remediation advice via Redscan's CyberOps threat management platform.
- **Security orchestration**
Threat research from Redscan Labs and latest intelligence from leading exchanges such as CiSP.
- **Scenario-based testing**
Offensive security assessments designed to help validate and improve threat detection controls and processes.
- **Full stakeholder reporting**
Custom weekly reports and service reviews inform stakeholders about the latest security risks.
- **Cyber incident response**
Experienced incident responders on hand to help investigate, contain and remediate breaches.
